EATON
Powering Business Worldwide

There's a certain energy at Eaton. It's the power of uniting some of the world's most respected names to build a brand you can trust to meet your every power management need.

Eaton is dedicated to ensuring that reliable, effi cient and safe power is available when it's needed most. Building on over 100 years of experience in electrical power management, the experts at Eaton deliver customized, integrated solutions to solve your most critical challenges. NZM1-4 molded case circuit-breakers

NZM1,2,3,4 up to 1600A

Description

Safe and reliable electric energy allocation, continuity and control for industrial, construction and machinery manufacturing. Innovative protection concepts, and communication functions with fault diagnosis

NZM series breakers

- Compact structure, 4 kinds of structures
- 3 pole and 4 pole
- Rated current up to 1600A
- Variety of installation
- Without derating at 50°C
- Comply for IEC, U/CSA, CCC

Page 4

Auxiliary contacts, trip indication auxiliary contacts

- The same type of auxiliary contacts installed in different locations, with different functions
- Reducing the model type, reducing inventory request
- Direct card installed, saving installation costs

Page 46

Rotary handles with door interlock

- Different models have a uniform hole size
- Automatic adjustment, position the center
- Side of the control functions, saving installation space of the main switch

Page 62

Remote operation

- Closing a short delay, 60~100 ms
- Lock, seal, ensuring safe operation

Page 74

Diagnostic Software NZM-XPC-SOFT

- Troubleshooting
- Data logging and debugging features
- In the operation can be load analysis

Circuit breaker, switch-disconnectors for North America 3 pole

Molded case switch
UL/CSA approved to UL 489, CSA 22.2 No. 5-09
as well as IEC/EN 60947-2 Annex L

With main switch characteristics to IEC/EN 60204, VDE 0113
Isolating characteristics to IEC/EN 60947
Without overcurrent protection
With short-circuit release
Rated uninterrupted current $I_n = I_u$

Note

Sliding switch for "Auto" or "Manual"

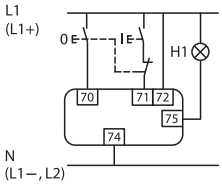
Max. number auxiliary contacts:

- Standard auxiliary contacts: 2
- Trip-indicating auxiliary contact: 1

Cannot be combined with switch-disconnector PN...

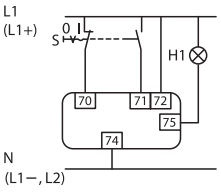
Cannot be combined with mechanical interlock

Three-wire control



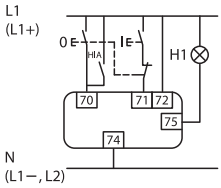
Terminal 70/71:
NZM-XR:Contact loading according to technical data
NZM-XRD:Full current flows though the contact during make and break! RMQ series contact elements can be used for the remote operators .NZM2(3.4)-XR(D)...

Three-wire control



Terminal 75:
NZM-XR:Operational readiness signal when over closed and not locked
NZM2-XRD: Operational readiness signal when sliding switch set to Auto.
Sliding switch with three positions:Manual/Auto/Locked for reliable differentiation of operating positions.
AC-15: 400 V; 2 A
DC-13: 220V; 0.2 A

Three-wire control with automatic reset to the 0 position after the switch has tripped



Switching cycle:

Description	Part no. Article no. when ordered separately	Std. pack	Notes
Diagnostics and configuration software for NZM and DMI (local)			
PC software for direct connection to all new NZM circuit breakers with electronic releases (IEC and UL/CSA devices) or for direct connection to the DMI module, including the required connection cable to NZM. • Protection parameter: online display and curve display, export option to curve characteristics program "Moeller CurveSelect". • Warning and release messages: reading of diagnostic memory also in voltage-free state. • Load currents: display and trend indication. • Recording and export options to Excel for load currents and diagnostic messages. • Configuration of the DMI: motor starter, remote operator, assignment of the DMI inputs and outputs and displays.	**NZM-XPC-KIT** 265631	1 off	Only for use in combination with circuit-breakers with electronic releases. Download the manual AWB1230-1459 and demo-software at www.eaton.com.cn/electrical.
Data management interface (DMI module)			
 • Access to diagnostics and operational data. • Recording current values, motor starter function, and setting parameters. • Control of the circuit-breakers with electronic trip block. • Comprehensive remote diagnostic options and remote operation via fieldbus in combination with a field Bus connection	**NZM-XDM1612** 260217	1 off	Only for use in combination with circuit-breakers with electronic releases. Download the manual AWB1230-1441 and demosoftware at www.eaton.com.cn/electrical.
Fieldbus interface for DMI			
Connection to the DMI module • Transfer of phase currents, parameter data, status data and diagnostics data. • Transfer of circuit-breaker position (wiring of auxiliary contacts to DMI inputs. • Actuation of the DM I motor starter functions and the NZM remote operator. • Detection of digital inputs and actuation via field Bus.			
 • PRDFIBUS-DPV1-Slave fieldbus interface. Can be operated with class 1 and class 2 masters. Addresses available: 1 to 126	**NZM-XDMI-DPV1** 270333	1 off	Connected to the DMI module and has the same contour appearance.
Switched-mode power supply unit For DMI module			
• Rated input voltage: 50/60 HZ: 115/230 V AC • Rated output voltage (residual ripple): 24 V DC (± 3 %) • Rated output current: 1.25 A	**EASY400-POW** 212319	1 off	-
Telescopic adapter For DMI module For equalization of the mounting depth when rear mounted in CI-K... enclosures and cabinets.			
 With 35 mm top-hat rail IEC/EN 60715, adjustable from 75 – 115 mm. Screw and snap fitting.	**M22-TA** 226161	1 off	-

Accessory

	Part no. Article no. when ordered separately	Std. pack	Notes
FDT frame software for operating field devices			
PC software for integration of software modules (DTM's) according to the FDT standard V1.2 (e.g. NZM-XPC-DTM). • Operation of a temporary or stationary service station for engineering, remote diagnostics, remote operation and remote parameter definition of networked switchgear and field devices. • Engineering of the network topology of networked field devices. • Overview representation of the topology with online status information. • Access to the device-specific DTM's for configuration, operation, parameterization and diagnostics of the devices. • Storage of all engineering information in a central database. Download and upload from/to the devices.	**FDT-NAVIGATOR** 281623	1 off	The connection of the field devices can be implemented via the PROFIBUS DPV1 master or via gateways (e.g.: USB/PROFIBUS, Ethernet/PROFIBUS). Communication interfacing for the PC and a communication DTM (driver) is necessary for this purpose.
DTM software module to FTD standard			
PC software module (Device Type Manager) to FDT/DTM standard V1.2 for integration in the FDT navigator or other FDT-capable framework software packages (primary control system, PLC engineering systems). • Remote diagnostics, remote monitoring, remote parameter definition and remote operation of the new NZM2,3,4 circuit-breakers with electronic trip release via PROFIBUS-DPV1. • Indication of the circuit-breaker state (on/off/tripped), the phase currents, parameter data, status data and diagnostics data. • Definition of the trip parameters. • Display and setting the DMI motor starter functions and assignment of the DMI inputs and outputs. • Control of the motor starter functions.	**NZM-XPC-DTM** 281624	1 off	For connection of the circuitbreaker to the PROFIBUS-DP fieldbus, the accessory device NZM-XDMI612 and the fieldbus interface NZM-XDMI-DPV1 are required.

Protection of PVC insulated cables against thermal overload due to short-circuits

According to VDE 0100 Part 430 Wiring Regulations, cables and conductors must be protected from overload and short-circuits. In circuit-breakers NZM, overload protection is implemented through the adjustable, current-dependently delayed overload release.

Short-circuit protection is provided by adjustable instantaneous releases, which open the main contacts in less than 25 ms. The short-circuit total opening time restricts the temperature rise of the cable to a minimum.

The tables indicate the minimum conductor crosssection reliably protected by circuit-breakers during a short-circuit. (Operating voltage U_n = 415 V)

Where the prospective fault current at the mounting location of circuit-breakers is very high current-limiting circuit-breakers NZMN(H) are normally used. A cost-effective alternative if the fault level is too high for circuit-breakers NZMB(C)(N) is to fit a current-limiting circuit-breaker NZMN(H) upstream of an arrangement of standard circuit-breakers NZMB(C)(N).
The table shows which current-limiting circuit-breakers NZMN(H) provide reliable protection at network locations with high short-circuit ratings in combination with NZMB(C)(N).
The selectivity limit is determined by the response current of the non-delayed short-circuit release in the upstream incoming circuit-breaker. In many applications this is sufficient.

Notes

The values stated in the table apply for 3 and 4 pole fixed mounted devices with an equal load distribution.
On 4 pole devices the current in the N-conductor is equal to zero.
The total resistive load is the measured value for a 3 pole or a 4 pole switch.
The total heat dissipation is the value measured at I_n, 50/60Hz for a 3 pole or 4 pole switch.
The heat dissipation can be calculated with the formula: $P = 3 \times R \times I^2$
